

## TACKLING TERMITES AT MISS ELIZABETH'S CABIN

*Green Frog Pest Solutions donates treatment to preserve a historic treasure*

**Moody Forest Nature Area** – 4,426 acres of pristine land along the Altamaha River in Georgia – is home to many historic treasures, including the only known remaining forest of Longleaf Pine/Blackjack Oaks. The Moody family settled this land in the 1880s and took care of the property for nearly 120 years. After the 1999 death of Elizabeth Moody, the last family member who owned the land, The Nature Conservancy and the state of Georgia bought the property to preserve this unique landscape for posterity.

Part of those preservation plans included restoring the only building on the property: the century-old family cabin where generations of the Moody family have lived. Unfortunately, before the cabin could be turned into an educational facility for visitors to the nature area, unwanted visitors need to be eliminated – termites. Kevin Lewis, owner of Green Frog Pest Solutions in Baxley, Ga., heard about the project and decided to get involved.

“I immediately offered to donate the **ADVANCE**<sup>®</sup> Termite Bait System, along with my company’s time,” Lewis said. “Miss Elizabeth’s cabin had suffered termite damage for many years and will need ongoing treatments moving forward.”

“I immediately offered to donate the **ADVANCE**<sup>®</sup> Termite Bait System, along with my company’s time,” Lewis said. “Miss Elizabeth’s cabin had suffered termite damage for many years and will need ongoing treatments moving forward.”

Lewis and his team assessed the damage and came up with a plan. Lewis was confident the **ADVANCE** Termite Bait System was the perfect product for the job.

“We wanted a solution that would address the entire termite colony surrounding the home,” Lewis explained.

Lewis and his crew installed the **ADVANCE** Termite Bait System, with stations around the cabin. The product's dual-stage design features disturbance patterned after natural termite feeding behavior, leading to colony elimination. Large-load containers allow for maximum bait to be fed to the colony in a shorter period of time.

With the generosity of Green Frog Pest Solutions and the effectiveness of the **ADVANCE** Termite Bait System, people will be able to enjoy the Moody Natural Forest and restored cabin for years to come.

Green Frog Pest Solutions has exclusively used the **ADVANCE** Termite Bait System for two years. "Using this product has been one of the best decisions I've made for my business," Lewis said. "It is so much easier to sell something you believe in, and the **ADVANCE** Termite Bait System has proven itself to me time and time again."
