Make your next home improvement one that protects your home. Restore your termite protection with Termidor® Restoration. For years, your home has been protected by your original Termidor treatment. To uphold its value, make a home improvement that will maintain its structural integrity against termites: Termidor Restoration. This treatment will fully restore your termite protection and preserve your biggest investment, now and for years to come.

Termite colonies may contain millions of termites, but they can go undetected until they've seriously damaged your home. The risk of termite infestations is constant. In residential areas of the U.S. where termite pressure is high, research shows an average of 25 termite colonies are present per acre.1

Challenging to control
Genetic analysis reveals that when one termite colony is eliminated from an area, another colony moves into that same area to fill the vacated niche.2

Studies show termites are primarily active in the top 12 inches of soil.3 This is also the area where soil disruptions most often occur, which may make a Termidor® Restoration treatment necessary.

Your original Termidor treatment provided a continuous zone of protection. Over time, changes around your home can disrupt your protection. Termidor® Restoration restores the protection around your home.

Ask for Termidor® termiticide, the top name in termite control. The #1 liquid termiticide in the country. With more than 20 years of research and 16 years of market performance, Termidor termiticide is the most trusted name in termite control. Relied on by pest professionals for proven performance, it features the most effective termite-control technology and application methods available.

A proven solution: genuine Transfer Effect technology
Termites cannot see or taste Termidor® termiticide's non-repellent formulation. Via social contact, they unknowingly transfer the termiticide to other termites, eliminating termites from the structure.

Termites: a constant threat
Termite colonies may contain millions of termites, but they can go undetected until they’ve seriously damaged your home. The risk of termite infestations is constant. In residential areas of the U.S. where termite pressure is high, research shows an average of 25 termite colonies are present per acre.¹

Challenging to control
Genetic analysis reveals that when one termite colony is eliminated from an area, another colony moves into that same area to fill the vacated niche.²

Has your treated zone been disrupted?

Studies show termites are primarily active in the top 12 inches of soil. This is also the area where soil disruptions most often occur, which may make a Termidor® Restoration treatment necessary.

Your original Termidor treatment provided a continuous zone of protection.

Illustrations are not to scale.

Over time, changes around your home can disrupt your protection.

Termidor Restoration restores the protection around your home.

Has your treated zone been disrupted?

Typical activities that affect the top 12 inches of soil immediately around the foundation of your home include:

- Adding or moving landscaping
- Animals digging along foundation
- Structural additions to the home
- Irrigation additions or repairs
- Heavy storm runoff with soil erosion
- Utility line additions or repairs
- Foundation repairs

When restoration is necessary, Termidor® termiticide is the answer.
