BASF Label Update Information

Bulletin Date: June 19, 2020

Trelona®
Compressed Termite Bait

EPA Reg No: 499-557
State approval date: February 2020
Estimated availability date of newly labeled product: late June 2020
States impacted: FL

Summary of Updates:

- Deleted the restriction statement for pre-construction use as a stand-alone preventative treatment for new construction in Florida. New label allows for use as stand-alone preventative treatment for new construction in Florida.

Detail of Updates (highlighted in yellow):

</tr>
<tr>
<td>In Florida, for use as a stand-alone preventative treatment for new construction, use two 124 gram cartridges in every bait station around structure. This product can be used for preventative treatment (before signs of infestation) of new structures (as a substitute for, and in lieu of, pre-construction soil treatment). Place stations around the outside of the structure only after the final exterior grade is established (and preferably after landscaping is completed).</td>

BASF Label Update Information

Trelona®
Compressed Termite Bait

This update impacts the state of FL only, but the updated label information will appear on all future Trelona® Compressed Termite Bait production runs for the US.

PMPs in FL must have product that was packaged with the updated label in their possession to perform pre-treats.

Product packaging of Trelona® Compressed Termite Bait with the new label Use Directions has been modified to differentiate from previously labeled versions (where Pre-Construction use was not allowed in Florida). Newly labeled product packaging contains a Blue Box directly to the right of the product name (examples to follow). Product packaging with previous labeling will not have a Blue Box to the right of the product name. Trelona® products with the older labeling can still be used for Post-construction baiting, Non-Structure Spot or Supplemental Treatments. Product packaging with the new label will be denoted with a Blue Box through 2021, allowing enough time for previously labeled inventories to be used up and to allow operators time to familiarize themselves with the differences between labels.

This label update can be found at http://www.pss.basf.us

The most current label can be found at http://www.cdms.net/label-database
