

# Fendona CS Controlled Release Insecticide

“I am pleased with our results using Fendona CS Controlled Release Insecticide. Over the last few years, we have used Fendona CS as part of our summer and fall rotation perimeter treatment barrier spray. The results have been astonishing. In that time, we have greatly reduced our callbacks among all types of crawling arthropod pests. This means happier customers and more room on the schedule for paid services instead of free reservices. It provides both a rapid knockdown and long-lasting residual control, even in the wet summers of the Carolinas. It is an excellent choice for exterior pest management programs throughout the summer and into the fall.”

**CHRIS CADDELL, DIRECTOR OF OPERATIONS,  
BLACK PEST PREVENTION, CHARLOTTE, N.C.**

“Fendona CS is a staple in our chemical rotation. We have been using it since it first became available. The product is great for all our general pest preventative services. We also have great results on cleanouts for existing infestations. It’s our go-to for spider infestations, especially recluse treatments. The tip-and-pour packaging makes measuring easy. The long residual from the controlled release makes it one of my favorite products in our inventory — and the broad label makes it a game-changer.”

## Features & Benefits

- ▶ The microencapsulated insecticide’s controlled-release formulation provides quick knockdown and long-lasting residual control of a wide range of pests, including mosquitoes, spiders, peridomestic cockroaches and occasional invaders
- ▶ Powered by the strength of alpha-cypermethrin, Fendona CS is suitable for both indoor and outdoor use and is ideal for mosquito outdoor maintenance, thanks to its rainfastness properties that allow it to last longer, even after rain events
- ▶ It also can be used in combination with other BASF outdoor products like PT Wasp-Freeze II Wasp & Hornet Insecticide and PT Tri-Dri Pressurized Dust Insecticide, for enhanced pest management and long-lasting residual
