

# Winter is at your doorstep. Pests shouldn't be.

BASF helps you win winter by keeping out uninvited guests with the right pest control solutions in and around your home.

**1** — **Rodents (mice/rats)**  
(garage doors, attics, vents)

Whether it's a roof rat, a Norway rat or a house mouse, rodents are looking for a warm place to nest. Place **Selontra® Rodent Bait** inside tamper-resistant bait stations around the exterior perimeter of the structure. Pay attention to garage door openings, vents and attic access points.

**3** — **Ladybugs**  
(doorways, vents, crawlspaces)

When the weather gets cold, ladybugs seek a cozy, safe place to hibernate. Applying **PT® Fendona®** in cracks and crevices and **Alpine® WSG** around the perimeter of your house will put a stop to ladybugs moving in.

**5** — **Ants**  
(cracks and crevices, exterior or interior wall voids, utility line penetrations)

When an ant colony moves into a home, they can be a nuisance. Use **Termidor® SC** and/or **Alpine® WSG** to keep those ants from marching in.

**2** — **Spiders**  
(windows, doorways, eaves, shrubs)

Use **Termidor® SC** around the outside of doors and windows to stop spiders sneaking in. For added, long-lasting protection, apply **Fendona® CS** to entry points, under eaves, around shrubs and other hiding places.

**4** — **Stinkbugs**  
(windows, doorways, shrubs)

Whether through a crack or crevice, a vent or crawlspace, stinkbugs are always looking for an escape from the cold. Apply **Fendona® CS** and **PT® Fendona®** in vulnerable areas to keep stinkbugs at bay.

**6** — **Cockroaches**  
(mulch, shrubs touching the house, irrigation valve boxes)

Kick cockroaches to the curb by applying **Fendona® CS** around the perimeter and **PT® Fendona®** to cracks, crevices and other entry points.
